

A Project Report

On

“BookVerse – Book Review & Community Platform”

Submitted by:

Ms. Prarthana Basawraj Bhandari (Roll no. 2024MCA42)

Submitted to:

K.B Joshi Institute of Information Technology,
Pune in Partial Fulfillment of
Masters of Computer Application (MCA, Sem -II)

Under the Guidance of:

Prof. Manali Sapkal

Completion Certificate

This is to certify that this project entitled

“BookVerse – Book Review & Community Platform” submitted in

partial fulfillment of the degree of MASTER IN COMPUTER APPLICATIONS (MCA) to

S.N.D.T Women’s University, done by **Ms. Prarthana Bhandari Seat No:**

2024MCA42, is an authentic work carried out by her under my guidance. The matter embodied in this project work has not been submitted earlier for an award of any degree or diploma to the best of my knowledge and belief.

ACKNOWLEDGEMENT

The successful completion of this project required guidance and support from many individuals, and I feel extremely privileged to have received this throughout the development of my project. Whatever I have achieved is the result of their continuous encouragement and assistance.

I would like to express my sincere gratitude to **Prof. Manali Sapkal**, my project guide, for providing me with the opportunity to work on this project and for her valuable guidance, support, and encouragement at every stage. Her suggestions and insights greatly helped me in completing this project successfully.

I am also thankful to all the teaching staff of **K.B. Joshi Institute of Information Technology, Pune**, for their constant support and for providing the necessary resources and knowledge required for this project.

I would like to extend my thanks to my friends and seniors who helped me during the development of this project by giving useful suggestions and identifying errors, which improved the overall quality of the work.

I would also like to mention that the idea of this project was inspired by a course on Udemy and the concept shared by Derek Sivers, which motivated me to build a platform for organizing and reviewing books.

Finally, I express my heartfelt gratitude to my family for their continuous support, encouragement, and understanding throughout my academic journey.

Prarthana Basawraj Bhandari

INTRODUCTION

“BookVerse – Book Review & Community Platform” is a web-based application developed to simplify the way users explore, review, and manage books in a digital environment. This system is designed to replace the traditional method of remembering or manually noting down book details with a structured and computerized platform, where data can be stored securely and accessed easily at any time.

The project focuses on providing a smooth and efficient experience for users by allowing them to browse books, write reviews, give ratings, like and comment on reviews, and manage their reading activities in an organized manner. It ensures faster data processing, better data management, and improved user interaction through a clean and user-friendly interface.

One of the important features of BookVerse is the “Best Books” recommendation section, where books are ranked based on user ratings, number of reviews, likes, and overall community engagement. This helps users quickly discover popular and highly recommended books without searching through every review manually. The platform also encourages community interaction by allowing multiple users to share their opinions and experiences about the same book.

In BookVerse, modern technologies such as React.js for frontend development, Node.js and Express.js for backend processing, and PostgreSQL for database management are used. The system mainly consists of two modules: the user module and the admin module. The user module allows users to register, explore books, write reviews, like and comment on reviews, and manage their personal dashboard, while the admin module helps in managing users, reviews, categories, comments, featured books, and overall system activities.

EXISTING SYSTEM

In the existing system, people usually manage their book reading and reviews in an unorganised way. Most users depend on memory, personal notes, or scattered platforms like social media, blogs, or websites to keep track of the books they have read. There is no proper system to store all book-related information in one place.

Users often write their thoughts about books in notebooks, mobile notes, or different applications, which makes it difficult to manage and access the information later. Finding previous reviews or remembering details about a particular book becomes time-consuming and confusing.

There is also no structured platform where users can easily explore books, compare reviews, or interact with other readers. Recommendations are mostly based on word of mouth or random online searches, which may not always be reliable.

Overall, the existing system lacks organisation, proper data management, and a centralised platform for book reviews and community interaction.

DRAWBACKS OF EXISTING SYSTEM

The existing system of managing book reviews and reading records has several limitations. Since there is **no centralised platform**, users often struggle to keep their book-related information **organised** and **easily accessible**, leading to confusion and difficulty in tracking previously read books.

One major drawback is the **lack of proper structure**. Reviews and notes are stored in different places, such as notebooks, mobile apps, or websites, making it hard to **manage and retrieve information** when needed.

Another issue is the **absence of user interaction**. Users cannot easily connect with other readers, share opinions, or get **reliable recommendations**, which limits the overall experience.

Additionally, the system depends on **manual efforts**, which are **time-consuming** and less efficient. There is also **no proper filtering or sorting mechanism** to organise books based on ratings, categories, or recency.

Overall, the existing system is **inefficient, unorganised, and lacks a user-friendly approach**.

PROPOSED SYSTEM

The main purpose of “BookVerse – Book Review & Community Platform” is to provide a centralized and user-friendly system where readers can explore books, share reviews, and interact with other book lovers in a digital environment. The system is designed to overcome the limitations of traditional or unorganized methods of managing book reviews and reading activities by offering a smooth, secure, and efficient online platform.

The proposed system helps users easily store, manage, and access book-related information from anywhere at any time. Users can explore different books, read community reviews, write their own reviews, give ratings, like and comment on other users’ reviews, and discover trending or highly recommended books through the “Best Books” ranking system.

One of the important features of the system is the recommendation and ranking section, where books are ranked based on ratings, number of reviews, likes, and overall user engagement. This helps readers quickly identify popular and highly appreciated books without manually searching through large amounts of content.

The key objectives of the proposed system are:

1. Efficient Review Management

Users can easily create, edit, and delete their own book reviews. This helps in maintaining reviews in an organized and structured manner.

2. Accessibility and Convenience

The platform can be accessed anytime and from anywhere, allowing users to explore books, manage reviews, and interact with the community easily.

3. Improved User Experience

The system provides a clean and user-friendly interface with features like search, categories, rankings, likes, and comments, making navigation simple and interactive.

4. Centralized Data Management

All user information, reviews, ratings, comments, and book-related data are stored in a centralized PostgreSQL database for faster access and better management.

5. Interactive Community Platform

Users can share opinions, read reviews from multiple readers for the same book, like reviews, comment on discussions, and become part of an active reading community.

6. Best Book Recommendation System

The platform includes a “Best Books” section where books are ranked according to ratings, likes, reviews, and reader engagement. This helps users discover popular and highly recommended books quickly.

7. Personal Dashboard Management

Registered users can access their personal dashboard to manage their reviews, track activity, and perform CRUD operations on their own content.

8. Admin Management and Monitoring

The admin module helps manage users, reviews, comments, categories, featured books, and platform activities. Admins can monitor system performance and maintain platform quality.

9. Reduced Manual Work

The automation of review management, ranking calculation, and data handling reduces manual effort and improves efficiency.

10. Data Security and Reliability

The system securely stores user data and ensures reliable access to information whenever required.

Overall, the proposed system provides a modern, organized, interactive, and community-driven platform that improves the overall reading and book review experience for users.

OBJECTIVE OF THE PROPOSED SYSTEM

The main objective of the BookVerse system is to create a simple, interactive, and efficient platform where users can explore books, read reviews, and manage their own reviews in an organized way. Just like people ask their friends for opinions before watching a movie, this system helps users decide whether a book is worth reading based on ratings, reviews, likes, and comments shared by other readers.

The system aims to provide easy-to-use features that allow users to add, update, and delete their reviews while improving the overall reading and reviewing experience. Users can also like and comment on reviews, making the platform more engaging and community-driven.

Another important objective of BookVerse is to help users discover popular and highly recommended books through the “Best Books” ranking system. Books are ranked based on ratings, number of reviews, likes, and overall user engagement, helping readers quickly find quality books without searching manually through every review.

The system also reduces manual effort by storing all user, review, and book-related information in a centralized database, making data management faster, secure, and more reliable.

Overall, the goal of BookVerse is to develop a modern, user-friendly, and reliable platform that makes book exploration, selection, reviewing, and community interaction simple, meaningful, and efficient.

SCOPE OF PROPOSED SYSTEM

The scope of the BookVerse system includes the design and development of a web-based platform that helps users explore, review, rank, and manage books in an organized and interactive way. The system provides a simple and user-friendly interface where readers can easily add reviews, give ratings, like and comment on reviews, and check others' opinions before deciding whether a book is worth reading.

The platform allows users to access the system anytime and from anywhere, making it convenient to manage reading activities, discover new books, and interact with the reading community. Users can also explore the "Best Books" section, where books are ranked based on ratings, number of reviews, likes, and community engagement, helping readers quickly identify popular and highly recommended books.

The scope of the system also includes personal dashboard management, where registered users can manage their own reviews, track activities, and perform CRUD operations on their content. Guest users can explore books and reviews, while logged-in users get additional interactive features and personalized access.

For administrators, the system provides an admin dashboard to efficiently manage users, reviews, comments, featured books, categories, and overall platform activities. Admins can monitor platform statistics, moderate content, and maintain system quality.

Overall, the scope of BookVerse focuses on making book discovery, reviewing, ranking, and community interaction easy, accessible, organized, and efficient for all users.

FEASIBILITY ANALYSIS

Preliminary investigation examines project feasibility and the likelihood the system will be useful to the organization. The main objective of the feasibility study is to test the Technical, Operational, and Economic feasibility of adding new modules and debugging the old running system. All systems are feasible if they have unlimited resources and infinite time. There are aspects in the feasibility study portion of the preliminary investigation:

- Technical Feasibility
- Operation Feasibility
- Economical Feasibility

1. Technical Feasibility

The technical issues usually raised during the feasibility stage of the investigation include the following:

- Does the necessary technology exist to do what is suggested?
- Do the proposed types of equipment have the technical capacity to hold the data required to use the new system?
- Will the proposed system provide an adequate response to inquiries, regardless of the number or location of users?
- Can the system be upgraded if developed?
- Are there technical guarantees of accuracy, reliability, ease of access, and data security?

Earlier no centralized platform existed to cater to the needs of book readers and reviewers. The current system, BookVerse, is technically feasible as it is a web-based platform built using modern technologies such as React.js, Node.js, Express.js, and PostgreSQL. It provides easy access to users through a clean and responsive interface. The system is designed to manage users, reviews, categories, likes, and comments in a structured and secure manner. Role-based access ensures that appropriate permissions are granted to Guest users, Registered users, and Administrators.

2. Operational Feasibility

Proposed projects are beneficial only if they can be turned into information systems. That will meet the organization's operating requirements. Operational feasibility aspects of the project are to be taken as an important part of the project implementation. Some of the important issues raised to test the operational feasibility of a project include the following: -

- Is there sufficient support for the management from the users?
- Will the system be used and work properly if it is being developed and implemented?
- Will there be any resistance from the user that will undermine the possible application benefits?

This system is targeted to be by the above-mentioned issues. Beforehand, the management issues and user requirements have been taken into consideration. So, there is no question of resistance from the users that can undermine the possible application benefits.

3. Economic Feasibility

Economic feasibility analyses whether the system is cost-effective. The BookVerse project is developed using **open-source technologies**, which reduces development costs.

The benefits of the system, such as **time saving, better data management, and improved user experience**, outweigh the development cost. Hence, the system is **economically feasible**.

H/W and S/W REQUIREMENT

HARDWARE REQUIREMENTS:

Component	Minimum Requirement	Recommended Requirement
Processor	Intel Core i3 / AMD Ryzen 3	Intel Core i5 / AMD Ryzen 5 or higher
RAM	4 GB	8 GB or higher
Storage	10 GB free disk space	50 GB SSD
Network	Broadband Internet (for API)	High-speed broadband
Display	1280 x 720 resolution	1920 x 1080 Full HD
Operating System	Windows 10 / macOS 10.14 / Ubuntu 20.04	Windows 11 / macOS 13+ / Ubuntu 22.04+

SOFTWARE REQUIREMENTS:

Software	Version	Purpose
Node.js	v18.x or higher	Backend runtime environment
npm	v9.x or higher	Package manager
React (Vite)	v18.2 / Vite v5.x	Frontend framework
PostgreSQL	v15.4	Relational database
Express.js	v4.18.x	Backend web framework
VS Code	Latest	Code editor / IDE
Git	v2.x	Version control
Postman / curl	Latest	API testing
Browser (Chrome / Edge)	Chrome 120+ / Edge 120+	Frontend testing

NPM Packages — Frontend

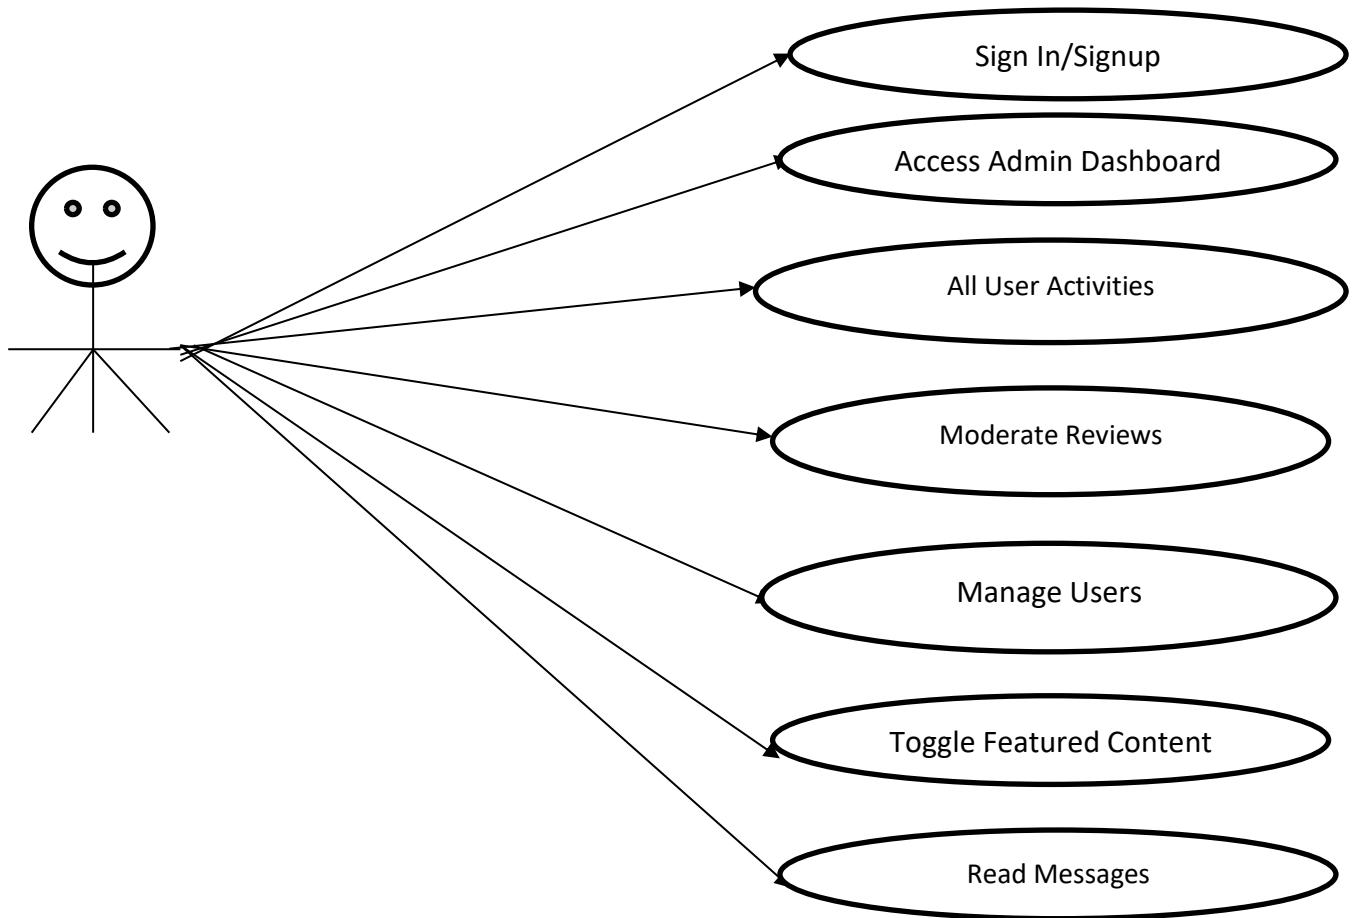

Package	Version	Purpose
react	^18.2.0	Core UI framework
react-dom	^18.2.0	DOM rendering
react-router-dom	^6.20.1	Client-side routing
axios	^1.6.2	HTTP requests to the backend API
lucide-react	^0.294.0	Icon library
chart.js	^4.x	Doughnut chart in Admin Dashboard
react-chartjs-2	^5.x	React wrapper for Chart.js

NPM Packages — Backend

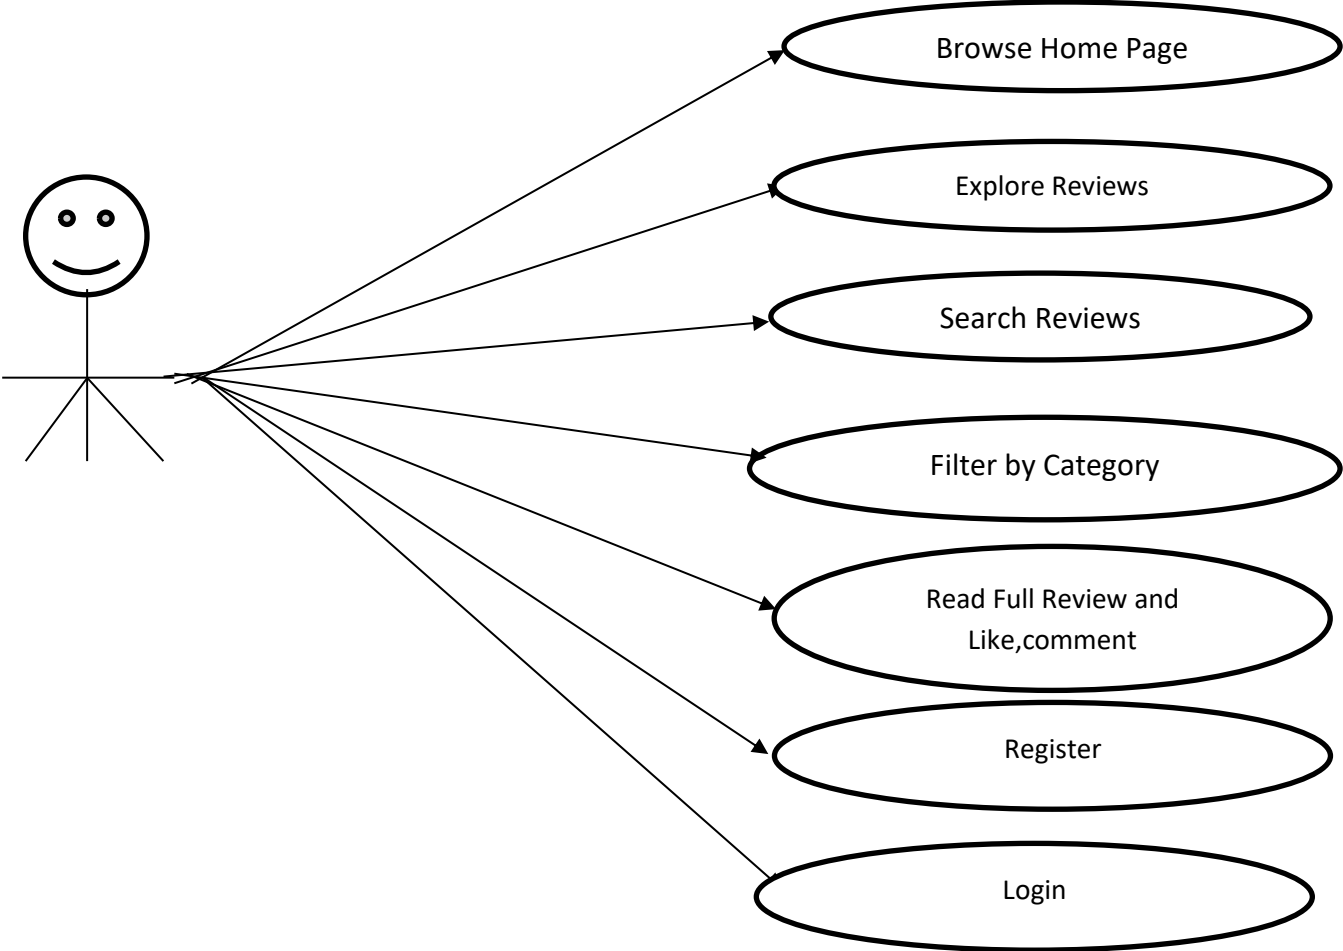

Package	Version	Purpose
express	^4.18.2	Web server framework
pg	^8.x	PostgreSQL client for Node.js
bcryptjs	^2.4.3	Password hashing
jsonwebtoken	^9.0.2	JWT authentication
cors	^2.8.5	Cross-origin resource sharing
dotenv	^16.3.1	Environment variable management
nodemon	^3.0.1	Auto-restart during development

About BookVerse

We believe every reader has a story worth sharing.

OUR FOUNDATION

[HOME](#)[ABOUT](#)[EXPLORE](#)[WRITE](#)[CONTACT](#)[Signup](#)[Login](#)

Inspiration: The Digital Second Brain

The idea for BookVerse was born from Derek Sivers' fantastic approach to personal **knowledge management**. His meticulous notes, ratings, and methodical organization proved that a shared library can be more than just a list — it can be a **permanent digital legacy**.

- 1 Every book you read becomes a structured insight
- 2 Ratings and categories create a personal knowledge map
- 3 Your reviews help others make better reading choices

Best Book

Write page as guest

The screenshot shows the 'Write a Review' page for a guest user. The page has a dark header with the BookVerse logo and navigation links: HOME, ABOUT, EXPLORE, WRITE, and CONTACT. There are 'Signup' and 'Login' buttons in the top right. The main heading is 'Write a Review' with a subtext 'Writing as guest. Login to track your reading history.' Below this, a yellow box states 'You are browsing as a guest' and provides instructions to login or sign up. The form includes fields for 'YOUR NAME *' (with example 'e.g. Sarah K.'), 'ISBN — AUTO-FETCHES COVER' (with example 'e.g. 9780316769174' and a 'Fetch Cover' button), 'BOOK TITLE *' (with example 'The Great Gatsby'), 'AUTHOR NAME *' (with example 'F. Scott Fitzgerald'), 'CATEGORY' (a dropdown menu), and 'YOUR RATING *' (five stars). A 'LIVE PREVIEW' section shows a book cover placeholder and fields for 'Book Title' and 'Author Name'. A 'Tips' section lists helpful hints. The footer shows a search bar, social media icons, and system status (ENG IN, 14:17, 10-05-2026).

Write page as login user

The screenshot shows the 'Write a Review' page for a logged-in user named Prarthana. The header now includes 'MY DASHBOARD' and 'MY DASHBOARD' buttons, and the user's name 'Prarthana' is displayed. The main heading is 'Write a Review' with a subtext 'Logged in as Prarthana · 4 reviews posted'. The form includes fields for 'ISBN — AUTO-FETCHES COVER' (with example 'e.g. 9780316769174' and a 'Fetch Cover' button), 'BOOK TITLE *' (with example 'The Great Gatsby'), 'AUTHOR NAME *' (with example 'F. Scott Fitzgerald'), 'CATEGORY' (a dropdown menu), and 'YOUR RATING *' (five stars). A new field 'COVER URL (OPTIONAL — PASTE ANY IMAGE URL)' is added with the example 'https://covers.openlibrary.org/...'. A 'YOUR REVIEW *' section is also present with the prompt 'Share your honest thoughts about this book. What did you love? What could be better? Would you recommend it?'. The 'LIVE PREVIEW' section now shows the book title 'The Great Gatsby' and author 'F. Scott Fitzgerald' by Prarthana. The 'Tips' section remains the same. The footer shows a search bar, social media icons, and system status (ENG IN, 14:21, 10-05-2026).

YOUR REVIEW *

The Alchemist is a beautifully written novel that tells the story of a young shepherd named Santiago who dreams of discovering a hidden treasure. What makes this book truly special is not just the adventure but the deep life lessons it delivers. The story focuses on the idea of following your dreams and listening to your heart. Throughout his journey, Santiago meets different people who guide him and teach him valuable lessons about life, courage, and destiny. The concept of "Personal Legend" is central to the book, encouraging readers to pursue their true purpose in life. The language is simple yet meaningful, making it easy to understand while still being impactful. The book also highlights the importance of believing in yourself and recognizing

SYSTEM TESTING

The goal of the system testing process was to determine all faults in our project. The program was subjected to a set of test inputs and many explanations were made based on these explanations it will be decided whether the program behaves as expected or not. Our Project went through two levels of testing

1. Unit testing
2. Integration testing

UNIT TESTING

Unit testing is commenced when a unit has been created and effectively reviewed. To test a single module we need to provide a complete environment i.e. besides the section we would require

- The procedures belonging to other units that the unit under test calls
- Non-local data structures that the module accesses
- A procedure to call the functions of the unit under test with appropriate parameters

1. Test for the admin module

- **Testing admin login form**-This form is used for login of the administrator of the system. In this form we enter the username and password if both are correct administration page will open otherwise if any of the data is wrong it will get redirected back to the login page and again ask for the details.
- **Report Generation:** The admin can generate reports from the main database.

INTEGRATION TESTING

In the Integration testing, we test various combinations of the project module by providing the input.

The primary objective is to test the module interfaces to confirm that no errors are occurring when one module invokes the other module.

CONCLUSION

BookVerse – Book Review & Community Platform is a modern web-based application designed to provide users with a centralized space to read, write, and share book reviews. The platform enables readers to explore books, interact with reviews, and actively participate in a community-driven environment where knowledge and opinions are shared effectively.

The application replaces traditional and unorganized review systems with a structured and interactive digital platform. It also includes an admin dashboard that allows efficient management of users, reviews, categories, and overall platform activity.

The system has been developed with scalability and flexibility in mind, ensuring that future enhancements and feature integrations can be easily implemented. The following conclusions can be drawn from the development of the project:

- Automation of the book review and community system improves efficiency and user engagement.
- It provides a clean, responsive, and user-friendly interface for better accessibility.
- It supports role-based access control for users, reviewers, and administrators.
- It enhances communication and interaction within the reading community.
- Real-time updates and dynamic content handling improve overall system usability.
- Strong authentication and data security mechanisms ensure safe usage of the platform.
- The system offers significant scope for future enhancements such as AI-based recommendations, rating improvements, and social interaction features.

FUTURE ENHANCEMENT

BookVerse – Book Review & Community Platform has been designed in a flexible and scalable manner, allowing future improvements and new feature integrations without affecting the existing system. The system architecture supports continuous development based on user needs, technological advancements, and security requirements.

The application ensures that future updates can be implemented in a structured manner, where new requirements will be analyzed, tested, and added in each development phase until user satisfaction is achieved. High priority will always be given to maintaining data security, system reliability, and ease of use.

The following enhancements can be considered for the future development of the system:

- Any new requirement that improves usability, performance, or security can be added using an iterative development approach such as the Spiral Model. Additional features related to academic institutions or external integrations can also be incorporated when required.
- For improved authentication and data integrity, digital signature verification can be implemented to ensure secure transactions and user trust.
- User profile verification can be enhanced by adding profile images and identity-based validation for better authenticity within the community.
- The platform can be extended to support multi-language functionality, allowing users from different regions to access and interact with the system comfortably.
- Significant focus can be given to improving the frontend design by introducing more interactive UI elements, animations, and a smoother user experience to make the platform more engaging and user-friendly.
